PROFESSIONAL SUMMARY

Full Stack Web Developer with experience delivering web-based solutions and collaborating directly with clients and stakeholders to gather requirements and translate business needs into functional technical solutions. Comfortable working across the software development life cycle (SDLC), from requirements discussions through testing and delivery. Currently building SQL and Microsoft Power BI skills toward the PL-300 certification, with working knowledge of Python-based data tools (Pandas, NumPy, Matplotlib) and Excel, with the goal of growing into a Data Analyst role.

CORE SKILLS

Data & Analytics (Learning)	SQL and Microsoft Power BI — working toward PL-300 certification; basic working knowledge of Python data tools (Pandas, NumPy, Matplotlib) and Excel
Languages & Frameworks	React.js, JavaScript, Python, FastAPI, HTML, CSS
Backend & APIs	REST API Development, API Integration, Authentication Systems
Databases & CMS	PostgreSQL, Firebase, Sanity CMS, MySQL
Cloud & Tools	Cloudinary, Vercel, Git, GitHub, Postman
Core Competencies	Requirements Gathering, Stakeholder Communication, Data-Driven Problem Solving, Full Stack Development

PROFESSIONAL EXPERIENCE

Web Developer | Kanavu Startup Village

Dec 2025 – Present

- Identified a critical gap in project requirements — the absence of an admin capability for subscriber and blog content management — and proposed and implemented an admin module with Sanity CMS integration, reducing client dependency on developers for post-launch content updates.
- Partnered with 3+ clients and stakeholders through weekly meetings, calls, and daily status reports to gather, analyze, and translate business requirements into functional web solutions.
- Analyzed existing website structure and workflows for 3 WordPress-to-React migration projects, improving site maintainability and user experience through modernized architecture.
- Validated 20–40 functional requirements and test scenarios per project — covering UI behavior, form validation, API responses, CMS rendering, and business workflows — identifying 10–20 issues pre-launch and reducing post-release defects.
- Delivered 4–6 backend integrations, including Sanity CMS, REST APIs, subscriber management, and contact/data-handling systems, ensuring reliable data flow and CRUD functionality across frontend and backend.

Key Technologies: React.js, JavaScript, Python, FastAPI, Firebase, PostgreSQL, Sanity CMS, Cloudinary

Freelance Full Stack Developer | Self-Employed

June 2025 – Present

- Gathered stakeholder requirements for managing academic information, events, and announcements.
- Designed a content management solution enabling administrators to update website content without technical knowledge.
- Improved user experience through responsive design and optimized information architecture.

Key Technologies: React.js, Python, FastAPI, PostgreSQL

PROJECTS

- The Academy of Excellence** — School website with dynamic content management, academic programs, events & announcements. (React.js, Sanity CMS, Cloudinary)
- Ethique Hospital Website** — Responsive healthcare site featuring doctor profiles, services & patient info. (React.js, Sanity CMS)
- HSquare Promoters Website** — Real estate platform showcasing property developments and investment opportunities. (React.js, Sanity CMS)

EDUCATION & CERTIFICATIONS

- Bachelor of Engineering, Mechanical Engineering** 2018 – 2022
Erode Sengunthar Engineering College
Project: Wear analysis of Nickel Chromium thin sheets in A36 steel by plating technique
Certifications: AI Programmer Certification (TNSDC) | Python Programming Certification
